

The exercises during the hands-on laboratory of the course “Acquisition of digital resources through OCR”, held by Federico Boschetti, will make use of tools available online, which can be used remotely.

The presentation about the acquisition of digital resources will refer to the following tools:

- ScanTailor (<http://scantailor.org/>)
- Tesseract (<https://github.com/tesseract-ocr/>)
- OCRopus (<https://github.com/tmbdev/ocropy>).

It might be useful to look at them before the course.
