

The software that will be used in the course “Ontologies for Digital Humanities”, held by Timothy Tambassi, is Protégé.

Protégé is a free, open-source platform that provides a growing user community with a suite of tools to construct domain models and knowledge-based applications with ontologies.

It can be downloaded from:

<https://protege.stanford.edu>

where you will find all the needed information-

This software may be used also in the course “Introduction to Semantic Web”, held by Carlo Meghini.
